# HOUSING

1.5-2 sq. ft. area per bird should be allotted.

Litter Material (**Wood Powder/ Rice Husk**) should be 2-3 inch deep & maintained dry all the time.

The shed must be **cross ventilated**.

**Rain water** must not allowed to enter in shed.

For better laying, make provision for **lighting** (18-20 hours a day).

Make Hen House in the shed to allow the layer go & lay egg.

# CARE OF CHICKS

The chicks should be provided with some heat source for the first 15 days (950 F in first week followed by 90, 85, 80 in every week & make constant at 800F)

The chicks should not be allowed to huddle  
The chicks should be offered jaggery water mixed with some black salt (0.5%) for the first few days, this shall allow smooth expulsion of Meconium.

Vit. B-Complex, Vit. A, D3 & E should be given first 10 days

2 days Pre & Post vaccine, immunomodulator must be given (Vit. E & Selenium)

# SANITATION, HYGIENE & BIOSECURITY

Spray (B-904 @8ml/ltr water) should be done fortnightly in the shed & Over the birds also

The dead birds should be properly disposed (either buried with Salt/Lime or shall be burned or should be properly boiled before feeding to pig)

The feeder & drinkers should be cleaned daily. The drinker should be washed thoroughly (to remove the bio-film). Any sort of greasing inside the drinker should not be allowed to settle
